

In September, pv magazine 's Jonathan Gifford wrote, "in most Aussie homes using the electrons generated on the rooftop in the home - via a battery, simply doesn't pay" and that is still the case at the end of this tumultuous year, despite ongoing falls in battery prices. But LG Energy Solutions has just launched what it claims is the industry's largest home battery -- ...

Recently, I've noticed the battery voltage starting to lower from its "normal" level of just over 13 volts. Despite my replacing the Battery Charger assembly (#0A18010SRV), the Battery Charge Relay (BCR) with new GENERAC parts, a new battery, etc, the present battery voltage is now 12.4VDC (measured at the battery posts, connected).

Yes, t1 power goes to controller, and controller charges battery. When battery voltage drops below aprox 12.6 volts the charger should turn on and run for about 16 hrs. Final battery voltage varies per exterior temps. Also make sure the 120 v T1 power makes it all the way to the generator attachment point.

From pv magazine Germany. German redox flow battery manufacturer Prolux Solutions, a unit of Swiss building supplier Arbonia, has developed a new residential storage system with a capacity of 10 kWh.
