reduce the volume of imported electricity from Mexico. Solar DG, defined as energy generated close to the point of consumption, is poised to be a disruptive force to Belize's traditional centralised electricity infrastructure. Social acceptance of solar DG in Belize has heightened as solar photovoltaic (PV) module costs have trended downward.

Belize's solar energy is currently limited to off-grid use, primarily in remote areas by residential consumers, hotels, and resorts. Off-grid solar systems are completely self-contained and self-sufficient, providing electricity 24 hours a day. These systems have their own set of batteries to store and supply power, and they can also utilise ...

Belize's adoption of solar energy contributes to sustainability and reduces carbon emissions, aligning with global efforts to combat climate change. In the 2023 Belize Energy Policy, the Government of Belize committed to becoming a low-carbon, energy-efficient nation by 2040, addressing climate change and energy system interconnectedness. ...
