

Which sectors use the most electricity in the Northern Mariana Islands?

The commercial sector, led by tourism, is the largest electricity-consuming sector in the Northern Mariana Islands. 53 CNMI hotels use electricity for air conditioning, water heating, water purification, and lighting.

Does CNMI have access to electricity?

CNMI's electric utility generates electricity for the entire population of the territory. In 2022, electricity sales in CNMI were at their highest level since 2017, and the price per kilowatthour was at its lowest level since 2016.

Does CNMI impose a fuel surcharge on electricity?

Electricity customers in CNMI pay a varying fuel surcharge that depends on the price of diesel fuel. In May 2020, the fuel surcharge was at a low of 8 cents per kilowatthour. However, it rose to a high of 43 cents per kilowatthour by July 2022. As of February 2024, CNMI's fuel surcharge was approximately 25 cents per kilowatthour.

This profile provides a snapshot of the energy landscape of the Commonwealth of the Northern Mariana Islands (CNMI), a commonwealth in political union with the United States that is located in the northern Pacific Ocean.

Bei Hybrid-Systemen bleibt die PV-Anlage ans Netz angeschlossen, speist aber zusätzlich eine Batterie, die als Notstromversorgung dient. Im Normalbetrieb liefert das System Strom ins Netz oder für den Eigenverbrauch. Bei einem Stromausfall schaltet das System automatisch in den Inselbetrieb um.

This Strategic Energy Plan (SEP) update provides a road map for the Commonwealth of the Northern Mariana Islands (CNMI) to implement cost-effective energy management solutions, including efficiency/optimization

Northern Mariana Islands as of December 2023. It describes primary energy consumption, end uses, energy production, relevant policies, and key challenges, including details on the electric power and transportation sectors. The report serves as a baseline of understanding to assess CNMI's island-wide energy needs and priorities.

Beim Notstrom erfolgt die Netztrennung immer sofort, ohne Netzdienlichkeit. Beim Ersatzstrom erfolgt die Netztrennung erst nach Erfüllung der Netzdienlichkeit (Forderung bei PV-Anlagen). Die Netztrennung erfolgt automatisch oder manuell.
