

The Superhub site includes 20 charge points ranging from rapid (50kW+) to ultra-rapid (150kW+). Along with these, the project integrated 30 fast charge points (min 7kW). These make up half of the 100 charge points for council vehicle depots and public use that Oxford City Council has committed to.

UK-based investment Company Harmony Energy Income Trust plc ("HEIT") has successfully energised the 99 MW / 198 MWh Bumpers Battery Energy Storage System ("BESS") project in Buckinghamshire - making it the joint largest BESS (by MWh) in Europe.

The technology combines a 2.5MW power conversion system and a 5MWh battery into a single container, allowing the site to take up a relatively small area. The site is to be commissioned in the fourth quarter of 2024 and is expected to ...

Expanding BESS capacity can help mitigate uncertainties and, ultimately, help reduce energy bills. While BESS projects offer significant national and global benefits, it's equally important to support the local communities around these sites.

Battery storage sites will play a role in storing the intermittent renewable energy generated from Scotland's vast wind assets. With the country set to deploy 11GW of offshore wind by 2030, there is a necessity to scale the battery energy storage market to support the renewable generation.

Expanding BESS capacity can help mitigate uncertainties and, ultimately, help reduce energy bills. While BESS projects offer significant national and global benefits, it's equally important to support the local communities ...

The deal is the first announced long-term tolling agreement for a single BESS asset in Great Britain, creating a template for a new revenue structure that will help to unlock energy storage market opportunities across Europe.

A roundup of news from the UK BESS market, with developers ILI, Aukera, and Apatura having projects achieve planning permission, along with IPP Lightsource bp and a data centre in Wales, from the pages of our sister site Solar Power Portal.

Sembcorp Energy UK is planning on building what it claims will be Europe's largest battery energy storage system (BESS) as its site at Wilton International on Teesside. Land and connections are already in place to enable swift installation of the 360MW BESS, with the batteries themselves to be built in tranches, the company said.

The co-located BESS development is the result of three years of collaboration between &#216;rsted, NESO and National Grid Electricity Transmission (NGET), and was designated a Pathfinder project by the UK government's Offshore Transmission Network Review (OTNR).

Sembcorp Energy UK is planning on building what it claims will be Europe's largest battery energy storage system (BESS) as its site at Wilton International on Teesside. Land and connections are already in place to ...
