

What is Cabo Verde's energy strategy?

For example, in the water sector, Cabo Verde has improved water access, implemented desalination projects, invested in water storage, and enhanced the efficiency of irrigation systems. Our energy strategy is based on ensuring universal access and energy security for all, relying on renewable energy sources.

How can Cabo Verde achieve 'blue carbon'?

However, we need easier access to concessional financing, knowledge transfer, and technology to achieve these ambitious goals. In addition, as an island nation, Cabo Verde has unique options to leverage "blue carbon" opportunities based on sustainable management of blue economy resources, preserving ecosystems, and capturing carbon.

What is the energy sector in Cape Verde?

Cape Verde energy sector is strongly characterized by consumption of fossil fuels (derived oil—primary imported oil), biomass (wood) and use of renewable energy particularly wind and solar power.

Why should Cabo Verde invest in a blue economy?

They will also bring robust data, crucial for effective blue carbon programs. By integrating these opportunities into Cabo Verde's blue economy strategy, the nation can not only preserve its unique ecosystems but also contribute to global efforts in climate change mitigation and sustainable development.

Will Cabo Verde privatize Electra?

" The project will build on recent efforts from the World Bank to support the Government of Cabo Verde in the privatization of the electricity utility ELECTRA. A first step has been taken with the enactment of the power sector reform decree law, supported by the Cabo Verde First Equitable and Sustainable Recovery Development Policy Financing.

How will the Electra project support the government of Cabo Verde?

Finally, the project will support the Government of Cabo Verde's goal to mobilize private and public capital for energy sector investments, by increasing stakeholders' capacity and supporting the restructuring and privatization of the electricity utility ELECTRA.

As of 2022, Cape Verde's electricity consumption heavily relies on fossil fuels, with more than 80% of its electricity generated from such sources. This leaves about 16% of the electricity coming from low-carbon, clean energy technologies. The contribution from low-carbon sources is mainly from wind energy, accounting for around 14%, and solar energy, contributing a smaller share of ...
