

Where does Botswana get its power?

In 2023,BPC agreed to procure up to 600 MW of power generation from a yet-to-be-built coal-fired power station. Additionally,Botswana imports the bulk of its power from South African utility Eskom,and the rest from Nampower (Namibia),Zesco (Zambia),and the Southern African Power Pool (SAPP),to make up for any production shortfalls.

Does Botswana have hydro power?

There is no hydro power potentialin Botswana. The existing power generation system of Botswana is based on fossil fuels and consists of two coal-fired power plants and two diesel generators. The bulk of electricity produced locally comes from the coal-fired plant Morupule B,with the other coal-fired power plant being Morupule A.

Why did Botswana build a 600 MW coal power plant?

By then Botswana had planned to build a 600 MW Morupule B coal Power plant to support the existing aged 132MW Morupule A Coal Power plant. The two plants were adequate to meet the national demand. As the SADC region was experiencing power shortage,private sector showed interest in investing on power generation.

Does Botswana have a good electricity supply?

According to Statistics Botswana, local electricity generation and distribution has showed a slight improvement, increasing by 10.2 percent from 807,943 MWh during the fourth quarter of 2022 to 890,655 MWh during the first quarter of 2023. The increase was attributable to the performance improvement of Morupule A and B power stations.
