

Who is boson energy?

Next generation solutions based on 40 years in Hydrogen and waste. Having successfully co-founded, built and sold a first industrial cleantech start-up to Siemens AG, and then a second one to Nalco; Jan Grimbrandt founded Boson Energy in 2008, together with long-time business partner Professor Włodzimierz Blasiak.

Is boson energy a force-fitting technology?

Not at all. Boson Energy is part of a new generation of technologies that are not force-fitted into the energy transition and decarbonisation, but rather built for that very purpose.

Does boson energy have a 'non-recyclable' waste?

Boson Energy wins Hydrogen Production Category at Tech Tour Sustainability 2022 Finals in Essen, Germany. From a field of 800 applying startups, some 400 selected... That means recycling more than 10 million tons of 'non-recyclable' waste - and enough Hydrogen to keep 100,000 zero-emission buses or trucks on the road. Join our journey.

What is boson's hydrogen ecosystem model?

Boson's Hydrogen Ecosystem model integrates municipal services through sector coupling. It delivers Hydrogen from local waste, either direct or as grid-independent speed charging from Hydrogen - to avoid grid stress and power curtailing issues. It provides local zero-emission public transport, commercial transport and port operations.

Boson Energy (HPAG) (CO2) ...

Jan Grimbrandt, grundare och VD Boson Energy SA: "Wallhamn-projektet kommer att göra det möjligt för oss att demonstrera alla aspekter av vår vision om cirkulär ...

Local sustainable Hydrogen is key to move away from polluting and inefficient combustion-based energy - towards clean and efficient energy security and electrification. Boson Energy's project development model aims to eliminate compression, storage, and transport of H2 and rather deliver it as H2-powered heavy-duty fast charging that can ...

Boson Energy is an enabler of true decarbonization and zero-emission transport: We are on a path towards 1 million tons of Circular Hydrogen by 2030 Climate tech building capacity to save 25M tons of CO2 per year by 2030 - by ...

BOSON ENERGY offers a future-proof "first-mile" solution for thermochemical recycling of waste and biomass. Distributed Advanced Thermal Treatment (ATT) that converts complex streams of mixed

non-recyclable waste into local Hydrogen, power, heat, or thermal cooling for direct local use. Where it is most needed, and when it is most needed.

Boson Energy's integrated gasification-based technology and system solution cracks them into the fundamental molecules of Hydrogen - and CO₂ that we capture. Boson Energy "allows chemistry to do its thing" and translates that high temperature chemistry into math, that is then turned into algorithms - for maximum waste flexibility and ...

Where it is most needed, and when it is most needed. We work with local producers and owners of biomass and waste streams to treat waste locally - literally within the "first mile". We provide industry leading waste volume reduction (more than 99%) and energy efficiency.

Boson Energy developed a proprietary technology that "allows chemistry to do its thing" and translate that high temperature chemistry into math, that is then turned into algorithms - for maximum waste flexibility, high yield, automated process control, and predictive maintenance

Boson Energy developed a proprietary technology that "allows chemistry to do its thing" and translate that high temperature chemistry into math, that is then turned into algorithms - for maximum waste flexibility, high yield, automated process ...

Boson Energy (HPAG) (CO₂)

BOSON ENERGY is rolling out the next generation of sustainable waste-to-energy solutions that turn a wide range of mixed and hazardous wastes and biomass into energy for direct local use. Our zero-waste technologies also produce value added material rather than toxic ash requiring further treatment.

Clean air for future generations. Solving the world's waste problem. Too ambitious? Not at all. Boson Energy is part of a new generation of technologies that are not force-fitted into the energy transition and decarbonisation, but rather built for that very purpose.
