

Renewable energy includes wind,solar,biomass and geothermalenergy sources (although it is not yet known whether geothermal energy could generate any electrical power as only slightly over 100 degrees C had been found by 2023). Bulgaria has a high potential for solar irradiation,especially in the southern regions of the nation.

Bulgaria's energy sector is at a critical juncture, with two main objectives shaping its direction: decarbonization and reducing reliance on Russian energy. Over the past year, Bulgaria has made considerable progress in expanding its renewable energy capacity, particularly in solar power.

Over the past year, Bulgaria has made considerable progress in expanding its renewable energy capacity, particularly in solar power. Solar energy production has surged from one gigawatt (GWh) in 2019 to more than three GWh today, with solar accounting for nearly half of the country's electric capacity from renewables.

(Updates with background on significance of the win starting in first paragraph) Bulgarian Energy Holding, the company that groups Bulgaria's biggest state-owned utilities, inflicted a historic court defeat on the European Union's antitrust arm, as judges toppled a EUR77 million (\$81.6 million) fine for blocking rivals' access to infrastructure.

As a result,Bulgaria started to explore alternative energy options and sought to diversify its energy supply. This included increased interest in renewable energy sources,as well as efforts to strengthen its energy ties with the EU.

Bulgaria is also pushing for small- and medium-sized businesses to adopt more self-sustaining energy solutions, including solar energy and battery storage, to reduce dependency on the grid during peak consumption times. Source: IRENA
