

Where can I find information about Guadeloupe energy?

Welcome to the website of Guadeloupe Energie! On this website, you'll find information on Guadeloupe's progress on energy transition from energy legislation to industry data, from profiles for renewable energy in Guadeloupe to the latest news and events--all in one place.

How much does energy cost in Guadeloupe?

Energy Snapshot Guadeloupe This profile provides a snapshot of the energy landscape of Guadeloupe, an overseas region of France located in the eastern Caribbean Sea. Guadeloupe's utility rates are approximately \$0.18 U.S. dollars (USD) per kilowatt-hour (kWh), below the Caribbean regional average of \$0.33 USD/kWh.

How can Guadeloupe achieve energy independence?

"Achieving energy independence in Guadeloupe by shifting from fossil fuels to renewable energy sources is a challenge that we must take up for the benefit of future generations. With clear objectives and applying the means for success, the Multi-Year Energy Program (PPE) exemplifies our political resolve to reach our goals."

Does Guadeloupe rely on imported fuels?

Nevertheless, Guadeloupe's reliance on imported fossil fuels--more than half of the island's electricity is generated from imported petroleum-based fuels--leaves it vulnerable to significant disruptions in shipping or the availability of import facilities.

Stable Energy. Like geothermal, biomass or biogas energy, hydroelectricity is a so-called non-variable renewable energy source, meaning production does not fluctuate wildly and thus is highly predictable. Non-variable energy sources can maintain consistent, long-term production and, ideally, even be controlled and delivered based on consumer needs.

Guadeloupe is an active user of renewable energy sources including wind-power, geothermal science, hydraulic power, solar power, and the use of bagasse (burning residue from sugar cane and coal to produce electricity). The use of renewable energy produces almost 25% of the necessary energy for the archipelago. Type Sector Year Total Energy ...

Biomass is a renewable energy source whose potential is still poorly quantified and not yet fully exploited in Guadeloupe, with the exception of bagasse-based energy at Le Moule thermal power plant. The development of biomass energy as a substitute for coal power is one of the priorities of the regional government's Multi-Year Energy Program ...

Guadeloupe's dependence on imported and fossil fuels (petro-leum fuels, fuel oil, coal, butane) remains very high: it stands at 93%. It has nevertheless been declining steadily for 10 years, thanks to the gradual inclusion of more renewable energies in the electricity mix. In 2020, Guadeloupe has never produced so much electricity from

The aim of this paper is to present renewable energy sources and methods and effects of their use in Guadeloupe. Attention is also paid to steps undertaken by the administration in order to make the local population more interested in the use of these energy sources.
