

What is a functional cement-based battery?

The functional cement-based battery multitasks as a sustainable structural component and as an energy storage medium for buildings. Short carbon fibers are added to a cement-based mixture to increase conductivity and flexural toughness.

What is a cement-based battery?

A metal-coated carbon fiber mesh composed of iron and zinc for the anode and nickel oxides for the cathode is then embedded in the material. A prototype rechargeable cement-based battery demonstrated an energy density of approximately 7 Wh/m², 10 times greater than that achieved with earlier concrete-based batteries.

Is there a market for roof-top solar energy systems in Timor-Leste?

Australia's Market Development Facility (MDF) and ITP Renewables conducted an assessment of the potential market for roof-top solar energy systems in Timor-Leste.

Does Timor-Leste have electricity?

Timor-Leste has rapidly expanded electricity access to more than 83 per cent of the population but the country has yet to achieve energy security.¹ Consumer costs, even with government subsidy, remain high and outages are common. In addition, most of Timor-Leste's electricity is generated through costly and polluting diesel generators.

Could low-emissions cement and energy-storing concrete be the future?

Projects such as low-emissions cement and energy-storing concrete raise the prospect of a future where our offices, roads and homes play a significant part in a world powered by clean energy. --

What is the energy density of a rechargeable cement-based battery?

A prototype rechargeable cement-based battery demonstrated an energy density of approximately 7 Wh/m², 10 times greater than that achieved with earlier concrete-based batteries. While this value is low in comparison to commercial batteries, this limitation could be overcome by the large volume of battery material used in building construction.

within Timor-Leste's economy. Price changes for many products are captured by the consumer price index (eg. household consumption of rice). Price changes for other products (eg. concrete blocks used for house construction, accommodation purchased by international tourists) are not captured- approximations (eg. the consumer
