

Is the adoption of Bess a good idea?

Have you read? Presently, the adoption of BESS is low, and the growth of adoption is less than desired. As per the International Energy Agency (IEA), global BESS capacity was 85 GW at the end of 2023 and needs to reach 1200 GW by 2030 to enable seamless grid-integration of renewable energy, with net-zero 2050 emissions scenario as a target.

Why are banks lending to Bess assets & platforms?

Evolution of offtake structures and maturing BESS track record are supporting growing momentum behind banks lending to BESS assets & platforms. The traditional lending model developed in the GB market with a single long term offtaker (e.g. a utility trading desk) offering floor protection.

How can a large-scale adoption of Bess be achieved?

The large-scale adoption of BESS needs the active participation of low-risk/low-cost capital providers and established financial sector players such as banks, pension funds, and insurance companies, better known as institutional investors. This warrants the adoption of comprehensive investment risk mitigation measures.

What makes a Bess investor a strong performer?

The strongest performers tend to be underpinned by a combination of strong commercial, analytical & AI/data management capabilities. The good news for BESS investors is that increasing optimiser competition is pushing down fees and driving innovation in the evolution of offtake structures.

How has the Bess revenue environment changed over the last 12 months?

A tougher BESS revenue environment across the last 12 months has seen more selective lending from banks, with an increased focus on downside risk. However, lending momentum remains strong for the right projects & platforms, with attractive loan to value ratios available as well as merchant financing.

Why should infrastructure investors invest in Bess?

This is a key focus for infrastructure investors looking to protect equity exposure from downside risks. It is also important for the growing pool of debt capital targeting BESS projects & platforms. Despite a decline in BESS revenues across 2023-24, competition amongst offtake providers has risen significantly across the last year.

The Thurrock project combines a 300MW/600MWh BESS and a 270MW "flexible generation plant", i.e. a gas-fired power plant. The latter won a long-term contract in the UK's capacity market auction held earlier this year. ...

UK BESS debt finance is currently dominated by just two lenders, whereas we now have an abundance of potential equity investors. The result is that developers are no longer reliant on debt, and can eschew offtake

contracts that impede project returns, provided their investors believe in the fundamental business case of merchant batteries. ...

of project finance mechanisms to battery energy storage projects has been patchy to date. This report analyses the barriers to obtaining project finance for BESS projects, as well as highlighting the lessons that can be learnt from early BESS project finance success stories. It also explains: o Why BESS asset owners are having to rethink
