

Will Djibouti achieve 100% electricity by 2030?

The first wind farm project in Djibouti, representing a significant milestone for the country on its path towards achieving its goal of 100% electricity from renewable sources by 2030.

How much energy does Djibouti consume?

According to USAID, Djibouti consumes 100 megawatts of electricity, but only 57 megawatts are reliably available to serve the population due to underdeveloped energy infrastructure. Much of Djibouti's remaining energy comes from its own geothermal, solar, wind and biomass sources.

Does Djibouti have a monopoly on electricity?

It should be noted that the state-owned company *Électricité de Djibouti* retains a monopoly on the transmission and distribution of electricity. The project was developed by Red Sea Power (RSP). "This site has the best wind energy potential in Africa, alongside Tangiers in Morocco," says François Maze, its CEO.

Why did Djibouti open up electricity production to independent operators?

For the government, the aim was to open up electricity production to independent operators so as to achieve energy independence as soon as possible. It should be noted that the state-owned company *Électricité de Djibouti* retains a monopoly on the transmission and distribution of electricity. The project was developed by Red Sea Power (RSP).

Will Djibouti be the first country to produce 100% green energy?

In its bid to become the first country on the continent to produce 100% green energy by 2035, Djibouti can also draw on other ambitious projects. These include the solar power project in the Grand Bara desert, for which work began in 2020.

Does Djibouti have geothermal power?

Djibouti currently has just over 100 MW of installed generation capacity, but only 57 MW is reliably available to serve a population of 940,000 and its key industries. Geothermal resources in Djibouti have been recognized for years, and exploration activities are currently underway to identify economic vapor resources.
