If you had 12 volt solar panels and your amps are 14, you would need a charge controller that had at least 14 amps. However due to environmental factors, you need to factor in an additional 25%. This brings the minimum amps that this charger controller must have to 17.5 amps. In this example, you would need a 12 volt, 20 amp charge controller.

Learn how to charge a 12V battery using solar panels, covering panel sizing, calculating quantity, selecting controllers, and setting up charging parameters. Whether you're setting up an RV system, charging a backup battery, or powering off-grid home in a remote location, this guide will walk you through everything you need to know about ...
