Currently, in San Marino, CA in the month of December, 2024, the cost per each watt for solar is \$2.92/W. In accordance with this price, expect to spend \$2,920, on average, for every 1000 watts (or 1 kW) of solar energy your solar system will need to produce.

Exergy and Anergy are important terms for understanding sustainability in the context of energy consumption. Well established in the scientific world, these terms are nearly unknown in public perception. This is astonishing regarding the man-driven climate change and...

Energy = exergy + anergy. In technical thermodynamics, exergy refers to the part of the energy that can do work. This is possible through a thermodynamic balance between the energy source and the environment. This work can be converted mechanically (car), chemically (hydrogen production), thermally (heating) or electrically (electricity).
