How to mitigate voltage and current imbalance in LV networks?

Traditionally,voltage and current imbalance in LV networks are mitigated by the conventional network reinforcementssuch as improving feeder lines cross-section and install additional feeder. Rq et al. and Shahnia et al. presented a voltage imbalance mitigation studies using traditional reinforcement methods.

How does Network Reconfiguration reduce voltage unbalance?

The common objective of the network reconfiguration is to reduce the losses by transferring load from the heavily loaded section to lightly loaded sections. However, networks reconfiguration is also used to reduce the voltage unbalance by reducing current unbalance.
