

How does solar energy work?

Solar technologies track large amounts of the sun-based energy and use this energy for the production of heat, light, and power. Solar energy can be changed over straightforwardly into power by photovoltaic cells (solar cells) and thermal power through solar collectors.

How is solar power generated?

Solar power is generated in two main ways: Solar photovoltaic(PV) uses electronic devices, also called solar cells, to convert sunlight directly into electricity. It is one of the fastest-growing renewable energy technologies and is playing an increasingly important role in the global energy transformation.

How do solar cells convert solar energy into electricity?

Solar cells can directly convert solar energy into electricity (photovoltaic cells). When light contacts the junction between a metal and a semiconductor (such as silicon) or the junction between two separate semiconductors, a tiny electric potential is created.

How many megawatts does a solar power station produce?

The Solar Star PV power station produces 579 megawatts of electricity, while the Topaz Solar Farm and Desert Sunlight Solar Farm each produce 550 megawatts. Learn more about photovoltaics research in the Solar Energy Technologies Office, check out these solar energy information resources, and find out more about how solar works.

How does solar heat conversion work?

Solar heat conversion requires the use of energy collectors, which are specifically built mirrors, lenses, and heat exchangers that concentrate the radiant energy from the sun and transfer it to a carrier fluid. The fluid heats up as it goes through the solar collector. Water/steam, oil, or molten salt are common heat transport fluids.

How does a solar power tower work?

Solar power tower (central receivers) - This system utilizes a huge field of mirrors to collect sun energy to the top of the tower, where a collector sits. Liquid salts generally moving through the collector is warmed by the concentrated sunlight. The gathered or obtained heat is transformed into power by a steam generator.
