Today, 85% of Iceland's primary energy production is met through renewables - the highest in Europe - although transportation is reliant on fossil fuels for now. ... "Windows of opportunity for geothermal are opening up across Europe, including Britain - anywhere there is a level of heat in the ground as low as 25-30°C; even." ...

The partners will study how the production of green e-fuel can aid the energy transition in the fisheries, shipping and haulage sectors in Iceland. They will also look into the production of carbon-neutral fertiliser, the use of the by-product of oxygen for fish-farming on land, as well the use of waste heat for heating houses in Reydarfjordur.

The Iceland National Committee aims to promote sustainable energy development in Iceland, as a part of the World Energy Council's energy vision. As a member of the World Energy Council network, the organisation is committed to representing the Icelandic perspective within national, regional and global energy debates. The committee includes a variety of members to ensure ...

Norwegian waste-to-energy company Geminor has signed what they say is the first-ever deal to export waste from Iceland for waste-to-energy generation. The company has signed a five-year contract to ship 70,000 tons of refuse-derived-fuel (RDF) from the country to a waste-to-energy facility in the Netherlands.

Iceland is the country with the highest proportion of energy availability from renewable sources in the world. 80% of available energy is derived from hydroelectric sources. The Icelandic National Power Company has just announced that construction of new plants will begin within the next decade.
