

Which solar panel is most powerful in Ksp?

The value is achieved at Kerbin 's distance,with the panel pointed directly at the Sun. The Gigantor XL Solar Array is a deployable solar panel. It is the largest and most powerful electrical energy source in KSP at this time,though in some situations the OX-STAT offers better power per unit mass.

What is the largest solar array in Ksp?

It is the largest and most powerful electrical energy source in KSP at this time,though in some situations the OX-STAT offers better power per unit mass. The single largest solar array available for purchase,the Gigantor XL offers tremendous generation potential from a compact initial package.

Does KSP track EC generation?

Iirc,KSP doesn't track EC generation or usage unless you're actively using that vessel. If you are flying,rotate with rcs Yes you can,with same vessel interaction and using stock solar panels to get the orientation from them,check this video out:

How does rosolar create solar panel parts?

ROSolar creates solar panel parts via combining various solar panel models from external mods with rescaling features. Why is it needed? ROSolar stems from a combined goal of reducing overall part clutter with the ability to affect solar panel performance when rescale the model. Many players will typically install mods for specific spacecraft.

How do I set a key to open and close solar panels?

You can also set a key to open and close solar panels using an action group,if you have many panels. Just giving specifics. When you're in the VAB building,if you look to the top middle of the screen you'll also see "action groups," which allow you to set an action to a certain key.

4 brand new photovoltaic panels are arriving at the KSC in the upcoming 1.12 update, including enhanced versions of the SP and OX-4 series, but also two large circular retractable solar panels to let your craft travel in the vacuum of space with style

The SP-L deploys a 1x6 solar cell layout. There is also a SP-W 3x2 version available with a 3x2 layout. These panels generate electric charge only on extended state, requiring the need to be directly illuminated by the light ...

Discussion of solar photovoltaic systems, modules, the solar energy business, solar power production, utility-scale, commercial rooftop, residential, off-grid systems and more. Solar photovoltaic technology is one of the great developments of the modern age. Improvements to design and cost reductions continue to take place.

Hi everyone, i was trying for the first time the deployable science in Kerbin, started with solar panel deployed by an engineer and then an experiment from a scientist but the solar panel it's no producing any sort of energy. It says true in both deployed and active status but it also says NOT linked and it's not producing the 2 unit of energy it should produce.

The OX-Stat-PD Photovoltaic Panel can, when properly set up by trained engineers, power several ground-breaking science experiments at a time. Reduced power output caused by allowing Jebediah to just "unfold the flippy bit" is not covered under the manufacturer's warranty. Needs a deployed central station to operate. -- Probodobodyne Inc "

I had a similar issue a long time ago where the solar panels just weren't solar panels anymore. I don't remember that being fixed, but it apparently was considering that I use OPM. Edited September 13, 2019 by TheKSPBeginner Elaborated

Nothing says "oops" more than a period of darkness or long interplanetary trip causing an unmanned craft to go "dead" because of forgetting to deploy the main solar panels before hand... A few fixed solar panels or an RTG for backup power helps prevent such incidents from happening. It should also be noted that the farther from the sun, the ...

Right click the Solar Array and select "Extend Panels". All moving parts in KSP can be activated by right clicking them and selecting the action from a dropdown menu. Holding down alt allows ...

Hey, I have an issue with my ksp in which, if i have modulemanger installed solar panels will not deploy. I've tried in the VAB, in space, at the launchpad, it never deploys, i also tried it on a new save and it didnt work.I don't even get the tab that comes up. This isn't a massive issue, however i would like the mod to work without breaking my game as it is required for ...

It's also helpful to note that action groups combine when assembling larger craft. For example, if you're building a space station, and you assign certain actions (e.g. toggle comm-antenna) to custom01 to one station part, and different actions (toggle solar panels) to custom01 a different station part; when the two components are joined in orbit, the actions for custom01 ...

Select action group 1, click on your solar panel, and click "toggle solar panel" (or some such) to add this command to the AG. Then in flight, you can tap 1 to open and close your panels. Make sure to put all your panels in the action group. This is easy if you only have one set of symmetrically placed panels!

The OX-STAT is a permanently deployed solar panel. It has no tracking ability and the lowest individual charge rate of any solar panel module, but it is extremely light and extremely cheap both in terms of unit cost and cost per unit electric charge generated. The OX-STAT is also less susceptible to breakage than other panels. However, it can be easily broken ...

This got me thinking: there are procedural parts mods for practically every single part type except solar panels. It'd be great if there was a mod that did just that, where you could adjust the length and width of the solar panel, with the power and mass scaling proportionately to ...

However, for many years now, we have known that KSP models its solar panels' output using an inverse square law w.r.t. the distance to the Sun. What I'm after is how KSP uses this in a config file: `chargeRate = 24.4`. to get to the actual EC/s output rate that the panel produces in the game.

Seems some Mods interfere with each other. Or you need to upgrade the VAB to level2 - "Basic Action Groups available". The Options -open -close -toggle are missing. On the Launchpad just rightclick the panels and choose extend/retract.

The home to all amateur astronomers & telescopes! Feel free to discuss anything astronomical here, from what sort of telescope you should get, stargazing tips and tricks, to how to use that scope of yours that's been sitting around!
