

Are PV & storage systems cost competitive in Lebanon?

As discussed above, PV + storage systems are not yet cost competitive in Lebanon. The financial parameters reflecting the other two options, based on the case of a 500 KVA (400 kW) diesel generator, are listed in Table 21. Roughly speaking, 500 KVA generators provide electricity to about 300 customers.

Why is there a shortage of electricity in Lebanon?

The electricity sector in Lebanon suffers from a chronic shortage of power supply which has been met by private diesel generators that have increased dramatically over the past two decades.

Can Lebanon get 30% of its electricity from renewables?

Lebanon could realistically and cost-effectively obtain 30% of its electricity supply from renewables by 2030, the study finds. But doing so requires considerable acceleration, effectively doubling the share expected from existing plans and policies. The LCEC action plan for solar and wind development represents a notable step in this direction.

What happens if there is excess energy in Lebanon?

However, when there is an excess of energy, it will be transported back to the grid. In Lebanon, this is expected to be a serious issue since the distribution grid is not of good quality, with already existing losses.

How have diesel generators improved Lebanon's energy security?

In this regard, diesel generators have enhanced Lebanon's energy security by allowing the country to continue to function when its power infrastructure was targeted (this is discussed in greater detail below).

Does Lebanon rely on distributed power generation?

In Lebanon, there is already some reliance on distributed power generation due to the wide use of diesel generators that cover the deficit between supply and demand.

Lebanon's power sector has been at the heart of its economic development and macro-fiscal framework for decades. While there is universal access to electricity in the country, Lebanon's ...
