

What is the long duration energy storage Council?

Today, on Global Energy Storage Day, the Long Duration Energy Storage Council celebrates the pivotal role energy storage solutions play in shaping a sustainable and resilient clean energy future and calls for accelerated action to scale and deploy these vital technologies. © 2024 LDES Council. Who is the CEO of the long duration energy storage Council?

As CEO of the Long Duration Energy Storage Council, an executive-led global nonprofit organization with more than 60 members operating in 20 countries, Julia leads strategic planning and market and policy development activities to rapidly deploy and scale long duration energy storage to support the clean energy transition worldwide.

Why do we need long duration energy storage?

Through long duration energy storage we can transition towards renewable energy in an affordable, reliable and sustainable way. Wind, solar and other renewables are becoming the lowest cost forms of generation but need storage to match supply with demand. Consumer demand means that peaks in the morning and evening need to be met by extra supply.

Providing energy storage beyond ten hours can enable remote mines, data centres and other off-grid industrial operations to run on continuous, carbon-free power, according to the report.

The LDES Council brings together leading LDES technology providers, equipment providers, renewable energy companies, utilities, grid operators, investors, and end-customers with a common mission of accelerating the deployment of long duration energy storage solutions in support of a net-zero carbon power system.

Long-duration energy storage (LDES) capacity should reach 1.5 TW by 2030 and up to 8 TW by 2040 to achieve global decarbonization targets, says the LDES Council. Its annual ...

Long-duration energy storage (LDES) capacity should reach 1.5 TW by 2030 and up to 8 TW by 2040 to achieve global decarbonization targets, says the LDES Council. Its annual report contains "seven enablers" to scale LDES, mostly hinging on awareness of the technology.

Around 65% of approximately 12.5 billion tonnes of greenhouse gases (GHGs) emitted through industrial processes globally in 2021 could have been cut, according to "Driving to net zero industry through long duration storage", the new study produced by management consulting firm Roland Berger for the Long Duration Energy Storage Council (LDES ...

The Green Energy Storage and Grids Pledge, launched on 15 November, targets a goal of 1.5TW of global energy storage by 2030, marking a sixfold increase from 2022 levels, in addition to doubling grid investment and developing 25 ...

Long-duration energy storage has a crucial role to play in decarbonising the global energy system sufficiently to avoid catastrophic climate change as long as its value can ...

Through long duration energy storage we can transition towards renewable energy in an affordable, reliable and sustainable way. Wind, solar and other renewables are becoming the lowest cost forms of generation but need storage to match supply with demand.

Around 65% of approximately 12.5 billion tonnes of greenhouse gases (GHGs) emitted through industrial processes globally in 2021 could have been cut, according to "Driving to net zero industry through long ...

In its inaugural Annual Report, the Long Duration Energy Storage Council presents a deployment roadmap to spur action among key stakeholders and decisionmakers. The report offers a current perspective and accounting on the global policy, regulatory and market environment for LDES, along with updated data and industry use cases.

Global decarbonisation targets are impossible without increasing the pace of long-duration energy storage (LDES) adoption 50 times over by 2040, according to the LDES Council. In a new report, the trade association suggested that 1TW of long-duration storage will need to be deployed on the world's grids by 2030 and 8TW by 2040 to align with ...

Long-duration energy storage has a crucial role to play in decarbonising the global energy system sufficiently to avoid catastrophic climate change as long as its value can be unlocked. That's the central thrust of a new ...

Long-duration energy storage has a crucial role to play in decarbonising the global energy system sufficiently to avoid catastrophic climate change as long as its value can be unlocked. That's the central thrust of a new 76-page report published today by the Long Duration Energy Storage Council (LDES Council), which aims to show the ...

The LDES Council's mission is to accelerate decarbonization of the energy system at lowest cost to society by driving innovation, commercialization and deployment of long duration energy storage. This will cut global emissions and ensure flexibility in electricity supply, while providing flexible, affordable, reliable, and resilient clean ...
