

New solar photovoltaic panels on the roof

Are in-roof solar panels a complete roofing solution?

Although sometimes mistakenly referred to as solar roof tiles, integrated solar panels are not designed to look like tiles or slates, so they aren't generally a complete roofing solution. So, when installing in-roof solar panels, you'll still need to account for other materials in your planning and calculations of in-roof solar panels costs.

Are solar roof tiles a viable alternative to traditional solar panels?

Solar roof tiles could be the answer if you're looking to utilise the sun's power and make use of a sustainable alternative for your energy needs. This article explores the costs, pros, and cons of solar roof tiles in 2024 and helps you understand how they differ from traditional solar panels.

Can solar panels be installed on a roof?

The solar panels and flashings can be fitted to the roof first and then the roof covering fixed around them. Integrated solar panels are also easy to install as a retrofit option. Simply remove the necessary section of roof tiles or slates, and replace with the solar panels.

Are in-roof solar panels a good idea?

While to some people regular solar panels can be unappealing, an in-roof solar system is a great solution if you want to prioritise your home's design. Lightweight: Unlike a traditional solar panel, which weighs around 18 - 24kg, putting some strain on your roof, integrated solar panels weigh about 10 - 20kg per panel.

What is a solar roof system?

The system is made up of individual panels mounted onto the roof which sit on top of your existing tiles or other roof finish. This solar roofing system is proven and widely available, but the main downside is the aesthetics. With an on-roof system, the panels are clearly added on as an afterthought and are not integrated into your home.

Are in-roof solar panels expensive?

Higher costs for an existing roof: While adding in-roof solar panels to an existing roof is possible, this is a more complex and potentially costly installation than on-roof panels. Exactly how much more you'll end up spending depends on the size of your roof and the duration of the installation process.

Solar tiles are a relatively new technology which takes thin film solar PV and makes it into individual roof tiles. These are installed in the place of regular roof tiles and can offer an aesthetically pleasing alternative for those who do not ...
