

How can Norway become a leader in sustainable batteries?

Investing in research, local manufacturing and secure access to materials is needed to solidify Norway's position as a leader in sustainable batteries. Battery technology is essential to meet Europe and Norway's zero emission targets by 2050, helping to reduce carbon emissions in the energy and transport sectors across the continent.

Does Norway have a battery market?

Today Norway has not one, but two huge battery markets. "There are two market drivers for batteries: EVs and stationary energy storage. Energy storage is coming on strong now. It's the key to turning intermittent wind and solar into a stable energy source," explains Pål Runde, Head of Battery Norway.

How big is Norway's battery market?

batteries for stationary energy storage - a market expected to reach EUR 57 billion by 2030. Now, a more mature Norwegian battery industry has greater potential to accelerate the renewable energy transition in Europe. Today Norway has not one, but two huge battery markets.

Why is battery technology important in Norway?

Battery technology is essential to meet Europe and Norway's zero emission targets by 2050, helping to reduce carbon emissions in the energy and transport sectors across the continent. In Norway, strong battery research communities have flourished for over a decade, attracting growing interest from the industry.

Why is Norway integrating into the European battery ecosystem?

In a shifting global battery landscape, Norway is increasingly integrating into the European battery ecosystem. This is an intentional move by all parties, as reaching global climate targets becomes more urgent for each passing year and geopolitical developments fuel action for European energy independence.

Why is Norway a world leader in batteries for transportation?

Within application of batteries for transportation, the majority of the research in Norway has been related to the maritime industry. This has given Norway a world leading position in this field. Corvus Energy is one of the pioneers in energy storage and delivers zero-emission solutions for all segments in the maritime transportation.

NorGiBatF - The Norwegian Giga Battery Factories (NorGiBatF) is a competence project to enable new battery industries to emerge in Norway. BattMarine - Knowledge-building project contributing to enable reliable, safe and economic ...

The first vanadium redox flow battery (VRFB) installation in Norway, a 5kW/25kWh system, was unveiled this week. Local firm Bryte Batteries installed the 5kW/25kWh system at the Sluppen commercial district, in

...

Battery technology is essential to meet Europe and Norway's zero emission targets by 2050 because they will facilitate the decarbonization of the European energy and transport sectors. At SINTEF, we are deeply involved in the development of the...

In a shifting global battery landscape, Norway is increasingly integrating into the European battery ecosystem. This is an intentional move by all parties, as reaching global climate targets becomes more urgent for each passing year and geopolitical developments fuel action for European energy independence.

The first vanadium redox flow battery (VRFB) installation in Norway, a 5kW/25kWh system, was unveiled this week. Local firm Bryte Batteries installed the 5kW/25kWh system at the Sluppen commercial district, in Trondheim, owned by property development company R. Kjeldsberg, the customer of the project.

We run a modern EV battery recycling plant in the city of Fredrikstad, Norway. It is designed to handle the current end-of-life batteries from the Norwegian EV fleet - 25,000 electrical vehicles or 12,000 tons of battery packs yearly.

Norwegian renewables company Statkraft and Dutch climate tech start-up Aquabattery partner to develop a promising technology to improve long-term storage of electricity through a flow battery made with salt water.

Discover the Flow Batteries Tour to learn about different flow battery projects being undertaken from Flow Batteries Europe members in Europe and beyond. The examples showcase how flow batteries are becoming readily available on the market and can really contribute to ...

NorGiBatF - The Norwegian Giga Battery Factories (NorGiBatF) is a competence project to enable new battery industries to emerge in Norway. BattMarine - Knowledge-building project contributing to enable reliable, safe and economic use of batteries in marine applications, including all-electric and hybridized propulsion systems

Battery technology is essential to meet Europe and Norway's zero emission targets by 2050 because they will facilitate the decarbonization of the European energy and transport sectors. At SINTEF, we are deeply involved in the ...

Battery technology is essential to meet Europe and Norway's zero emission targets by 2050, helping to reduce carbon emissions in the energy and transport sectors across the continent. In Norway, strong battery research ...

Battery technology is essential to meet Europe and Norway's zero emission targets by 2050, helping to reduce carbon emissions in the energy and transport sectors across the continent. In Norway, strong battery research communities have flourished for over a decade, attracting growing interest from the industry.

Bryte Batteries and R. Kjeldsberg have installed Norway's very first flow battery. The battery will be used for peak shaving and services for flexibility markets, but more importantly it will educate the Norwegian market on sustainable and reliable energy storage, says CEO Brian Stead from Bryte Batteries.
