Prices of models with the 75-kWh pack and the battery rental program BaaS (battery as a service) are the same as the previous 70-kWh pack. The 75-kWh pack is a hybrid of the common ternary lithium battery cells and lithium iron phosphate (LFP) cells, making Nio the world's first electric vehicle company to use both materials in its packs.

The Battery Size of the EV: This number corresponds with the full battery capacity of your vehicle. This number should be measured in kWh (Kilowatt-hour). Charging Efficiency: This is the efficiency of your battery when charging, and will be measured in a percentage. For the calculation, you simply need to use the charging efficiency percentage.

The FHP system pairs the aGate X with the aPower X, a lithium iron phosphate (LFP) battery designed by FranklinWH. A single battery has large 13.6kWh capacity with continuous power of 5kW, and its peak power 10kW can last for ...

Franklin claims 13.6 kWh capacity per battery, and a "roundtrip efficiency" of 89% (when new, charged and discharged at 2.5 kW, at 25C temperature, etc.) However their provided data says otherwise (granted at below 25C and charged with 2-8 kW power, for which they give me no control to limit).

It's the most efficient battery on our list at 98.5% round-trip efficiency. The VillaGrid has a lot to offer, but it didn't come in at number one because it's the only battery out of our top five picks that can't support extended outages. Depending on what you're powering, you can drain the 11.5 kWh battery pretty quickly.
