

Can solar energy replace fossil fuels on Pitcairn Island?

Pitcairn's authorities have launched a renewable energy project designed to replace fossil fuels with solar energy. The goal is to replace 95% of the current diesel consumption on Pitcairn Island (75,000 liters per year) with a combination of energy saving and solar electricity through the installation of a hybrid photovoltaic solar energy system.

How did Pitcairn Island get its name?

The British rediscovered the island on 3 July 1767 on a voyage led by Captain Philip Carteret, and named it after the fifteen-year-old Robert Pitcairn (a son of the soldier John Pitcairn) who was the crew member who first spotted the island; he was lost at sea three years later.

What is Pitcairn known for?

The island's honey is renowned for its purity and unique flavor, derived from local flora. Pitcairn also exports jewelry, carvings, coffee, and traditional Polynesian goods like Tapa cloth. These products are sold internationally and provide additional income streams for the island's residents.

How many islands are in the Pitcairn Islands?

The Pitcairn Islands form the southeasternmost extension of the geological archipelago of the Tuamotus of French Polynesia, and consist of four islands: Pitcairn Island, Oeno Island (atoll with five islets, one of which is Sandy Island), Henderson Island and Ducie Island (atoll with four islets).

Who inhabited Pitcairn Island?

The presence of stone tools, burial sites, petroglyphs, and other artifacts indicates that Pitcairn Island had been inhabited, probably by Polynesians, before its discovery by European explorers. The British ship HMS Swallow found the island in 1767, and its captain, Philip Carteret, named it Pitcairn for the sailor who first sighted it.

When was Pitcairn Island sighted?

Pitcairn Island was sighted on 3 July 1767 by the crew of the British sloop HMS Swallow, commanded by Captain Philip Carteret. The island was named after midshipman Robert Pitcairn, a 15-year-old crew member who was the first to sight the island.

The global biological value of the marine ecosystems of the Pitcairn Islands is outstanding, and deserves strict protection and recognition. A large no-take reserve, while allowing for traditional small-scale uses, conserves this unique environment, attracts scientific and conservation interest in studying and protecting the area, and also increases tourism to the islands, all of which ...

The island is of volcanic origin, with a rugged cliff coastline. Unlike many other South Pacific islands, it is not surrounded by coral reefs that protect the coast. The only access to the island is via a small pier on Bounty

Bay. Adamstown is ...
