Here is an actual photo of a Belize power outlet. The voltage range for Belize is 110/220V, while the standard frequency is 60Hz. Belize is unusual in that it has multiple voltage types depending on the region or city. The power supply is inconsistent throughout the country and some locations run power at 220V, while others run it at 110V.

Rule of thumb is a 30-gal system for up to 4 users, 40-gal up to 5, 50-gal up to 7 and 80-gal for up to 10 users. Chromagen systems have a life expectancy of up to 15 years with very little maintenance. Average ROI for systems is between 2-4 years; Download full details about Domestic Water Systems below. **START SAVING!**

And to the opposition: it is time to step up. Belize needs a strong, united opposition that is capable of challenging this government's dangerous slide into unchecked power. If we continue to allow political games and temporary appointments to replace real governance, we risk losing the very democracy we claim to cherish.

BEL said the extended power outage was due to a critical failure of a major component of a single transformer in their Maskall Substation on the mainland. The damaged equipment was replaced, and power was restored to Ambergris Caye; however, until the nationwide power crisis is resolved, islanders should be prepared for more planned outages.
