Managed or Unmanaged Power. Whole House Generator Systems manage power by controlling when some of the circuits receive electrical power. Consider the simple scenario of a home with a central air conditioner and an electric water heater and no other heavy loads. The homeowner chooses a medium capacity generator with power management.

Standby generators provide electrical power during an outage. When the automatic, permanently installed system detects an outage, first generator engine starts and then transfer switch moves all or part of the home's electrical system onto generator power. At the same time, it isolates the house from the electric utility lines.
