

Romanian developer Monsson has installed a 24 MWh battery storage system as the first stage of a 216 MWh project. The storage unit forms part of Romania's first hybrid PV-wind-battery system.

In its first, the Romanian government has allocated EU funds for two major battery energy storage projects via the National Recovery and Resilience Plan. A utility-scale solar-plus-storage site in northwest of the ...

The storage unit has an installed capacity of 24 MWh - (6MWx4h), it is built in Constanta county by Monsson, through a unique project pending patenting, and uses batteries of domestic production, produced by the Romanian company Prime Batteries Technology.

Romania is aiming to have at least 2.5 GW of battery energy storage systems (BESS) in operation by next year and to surpass 5 GW of capacity by 2026. Energy Minister Sebastian Burduja announced these ...

Romania is aiming to have at least 2.5 GW of battery energy storage systems (BESS) in operation by next year and to surpass 5 GW of capacity by 2026. Energy Minister Sebastian Burduja announced these ambitious goals in line with recommendations from domestic transmission system operator Transelectrica, which estimated the need for at least 4 GW ...

The storage system operates a NMC-type lithium-ion battery with a capacity of 6 MWh, produced in Romania and a total output power of 7 MW using 2 central battery inverters from SMA to inject directly into the medium voltage grid of the local grid operator ENEL Distributie Muntenia.

The Ministry of Energy of Romania has reopened a competitive solicitation for battery storage for the grid integration of renewable energy, seeking "at least" 240MW and 480MWh of resources.

A solar project from developer Econergy in Romania. The country's solar sector is set to grow substantially, which will help the battery storage market kick on. Image: Econergy. The European Commission has approved a EUR103 million (US\$125 million) package of direct grants from the government in Romania for battery storage projects.

Prime Batteries, a company supported by InnoEnergy, and Monsson have put into operation the largest electricity storage capacity in Romania. This is part of the first hybrid photovoltaic-wind-battery project within ...

In its first, the Romanian government has allocated EU funds for two major battery energy storage projects via the National Recovery and Resilience Plan. A utility-scale solar-plus-storage site in northwest of the country has flipped the switch.

By advancing battery storage and solar panel manufacturing, Romania is positioning itself as a key player in the energy transition landscape. These milestones not only contribute to the country's decarbonization goals but also set the stage for a more sustainable and efficient energy sector.

Romania's Ministry of Energy has reached two additional milestones under the National Recovery and Resilience Plan related to battery storage capacities and PV panel production.

Prime Batteries, a company supported by InnoEnergy, and Monsson have put into operation the largest electricity storage capacity in Romania. This is part of the first hybrid photovoltaic-wind-battery project within the Mireasa Wind Park in Romania.

The storage unit has an installed capacity of 24 MWh - (6MWx4h), it is built in Constanta county by Monsson, through a unique project pending patenting, and uses batteries of domestic production, produced by ...
