

How does a sphere solar power generator work?

The Spherical Solar Power Generator works by using a large transparent sphere to focus diffused sunlight onto a small surface area of mini-solar panels. Because the solar panels used on the device are so small, its relative efficiency is increased. It is, in effect, an innovative form of other concentrated photovoltaic technologies (CPVs).

What is a spherical Sun power generator?

The Spherical Sun Power Generator is a solar energy capture device designed by German Architect Andre Broessel. Called the beta.ey, he believes his invention is a solution capable of squeezing "more juice out of the sun". The actual development of the beta.ey has been conducted by Andre and Rawlemon Limited.

Could this sphere power generator be the future of solar energy?

Crystal balls have been telling fortunes in fairgrounds for many years, but this Spherical Sun Power Generator could be the future of solar energy. A German Architect has designed an innovative form of a solar power generator. Unlike being flat or thin like other PV panels, this one is a giant transparent sphere! [see-also]

What is sphelar solar-cell technology?

Sphelar solar-cell technology uses an array of tiny spheres of silicon within a transparent matrix to generate power, promising new opportunities for the use of solar cells in power-generating windows and portable, foldable power supplies.

Why do solar cells have a spherical surface?

A spherical surface can capture sunlight in three dimensions, thus improving power generation over standard two-dimensional solar cells. Placing a reflective material underneath the module significantly enhances the power output of the cell, as it gives any light bouncing off the reflector a second chance to be captured.

Could a spherical Sun power generator help us transition from fossil fuels?

The spherical sun power generator sounds like a fantastic idea that could potentially help in the transition from fossil fuels to complete renewable energy. However, with the lack of development and research of "beta.ey" technology, we are quite a long way from these solar spheres becoming a reality.
