The Grenadines was also affected, as the lack of rainfall and very warm temperatures had all but dried up the limited supplies stored on the islands. On many occasions, water had to be taken by ferry, trucked, and then distributed on the islands. This further added strain to the already limited supply on the island of St. Vincent.

St Vincent and the Grenadines and St. Vincent Electricity Services Limited (VINLEC), the national utility, have a long history of utilizing renewable energy for electricity generation. Hydropower has been a part of the

generation mix since the early 1950s, and in the late 1980s it represented half of the electricity produced by the utility.

St. Vincent and the Grenadines has suitable conditions of temperature and permeability at 2500 metres below ground to generate geothermal energy, a new report has confirmed. Exploratory drilling in La Soufriere started two months ago, and this week's report brings positive results from this exploration phase.
