

The Nuvation Energy BMS records high-current occurrences of contactor opening and decrements the remaining life at each occurrence, based on contactor safety testing performed at UL laboratories for Nuvation Energy. The BMS will warn users as the contactors approach their end of life.

The Nuvation Energy BMS has been rigorously tested for its responsiveness to an exhaustive range of potential safety incidents and found by UL to manage them all in functionally safe manner. Our UL certifications can be verified on the UL website.

Our Low-Voltage BMS is a fourth-generation product. Used in hundreds of energy storage systems worldwide and trusted by energy storage providers,our BMS is a mature field-proven product that has been safely managing large-scale energy storage platforms for many years.

The Nuvation Energy BMS will now be built-in to and featured in Honeywell's upcoming Ionic BESS, adding battery management capabilities that will make Ionic easier and more reliable for industrial and commercial users who ...

Nuvation Energy's Low-Voltage BMS is a UL 1973 Recognized battery management system that provides precise battery management and additional layers of safety assurance with features such as open wire detection, smart stack connection and disconnection, and sequential contactor disconnect under load.

With Nuvation Energy's configurable battery management system, accommodating different batteries is as simple as rolling out a BMS software configuration update. Pair our configurable BMS with standardized cell form factors to free your BESS from battery supplier dependence.

Nuvation Energy's new fifth generation battery management system can provide up to a 25% cost per kilowatt-hour (\$/kWh) reduction over their fourth generation BMS when used in 1500 Volt stationary energy storage systems. This new BMS also supports the most recent updates to UL1973 (UL 1973:2022).

Nuvation Engineering designed a battery management system for Ambri's Liquid Metal Battery energy storage system prototype. Nuvation detailed the requirements, completed the ground-up electrical architecture,

and built the circuit boards. Nuvation's BMS design allowed Ambri to bring their new technology one step closer to commercialization.

Nuvation Energy's Low-Voltage Battery Management System provides cell balancing and charge management and can be configured for most battery chemistries. The Nuvation Energy Low-Voltage battery management system supports stationary, grid-attached, and motive energy storage applications.

Designed specifically for lithium-ion battery chemistries, Nuvation Energy's new fifth-generation battery management system supports up to 1500 V DC battery stacks and modules that use cells in the 1.6 V - 4.3 V range. The G5 BMS offers cutting edge features such as continuous cell balancing and the ability to manage 2

Nuvation Energy's Low-Voltage Battery Management System provides cell balancing and charge management and can be configured for most battery chemistries. The Nuvation Energy Low-Voltage battery management system ...
