For example, if you need to power a 1000 watt load for 10 hours, you will require a battery bank with a capacity of at least 10,000 watt-hours (Wh) or 10 kilowatt-hours (kWh). A larger capacity battery bank will provide more flexibility and ensure that you have enough energy storage to meet your power needs throughout the day and night.

That means the average power required per day is 30 kWh. Now, when sizing a grid-tied solar battery system for daily usage, you will want a system that can deliver up to 30 kWh, or possibly more for peak usage days. However, if you also want the system to provide off-grid backup battery storage, then you will typically choose 3X to 5X the daily ...
