

Part 4. Recommended storage temperatures for lithium batteries. Recommended Storage Temperature Range. Proper storage of lithium batteries is crucial for preserving their performance and extending their lifespan. When not in use, experts recommend storing lithium batteries within a temperature range of -20°C to 25°C (-4°F to 77°F).

When you store a lithium battery, it is important to keep it at a partial charge rather than fully charged or completely drained. A charge level between 40-60% is considered ideal for long-term storage. This helps to ensure that the battery remains stable and doesn't experience excessive self-discharge during storage.

However, for everyday use and shorter-term storage, typical room temperatures (generally up to about 77°F or 25°C) are perfectly acceptable. The key is to avoid extremes, both in terms of cold and heat, as these can affect the battery's performance and overall lifespan. Lithium Battery Storage

Remove the lithium-ion battery from a device before storing it, and make sure to store the battery at 60-70% of the pack's rated capacity, with a voltage of around 3.6V. Use a lithium-ion battery fireproof safety bag or another fireproof container when storing batteries and protect cell terminals with electrically insulating material.

Lithium. Lithium batteries have slightly different storage needs. Instead of keeping them fully charged like you would with lead-acid or AGM batteries, Lithium batteries should be stored at between 40 - 60% state of charge. Storing a fully charged or fully discharged lithium battery will accelerate the degradation it is exposed to over time.

Lithium batteries age from the following factors: Time - Part One Cycles - Part One Storage/operating temperature - Part Two Charge characteristics - Part Two Discharging characteristics ...

Avoid storage voltage for lithium ion battery high temperatures, as it can shorten the battery life and in severe cases can lead to an explosion. If possible, it can be stored in a refrigerator. If the laptop is using AC power, please remove the lithium-ion battery to avoid being affected by the heat generated by the computer. 5.
