Will the Virgin Islands reduce fossil fuel use by 60% by 2025?
The Virgin Islands,with support from the U.S. Department of Energy (DOE) and the Office of Energy Efficiency and Renewable Energy (EERE),have set a goal of reducing fossil fuel use by 60% by 2025.

How many solar energy systems are installed in the Virgin Islands?
Nearly 1,*500 solar energy systemshave been installed throughout the territory. 15 MW of distributed solar PV are either in place or under construction. As a result,the Virgin Islands government has authorized $35 million in funding to install lighting and water retrofits in 34 more schools.

What is the cost of wind energy in St. Croix?
The cost of wind energy in St. Croix ranges from $0.08 to $0.14 per kWh. The localized cost of energy from utility-scale wind projects ranges from this amount. St. Croix has moderate potential to generate 3 MW to 5 MW of energy from biomass because the majority of the island is covered with forest. Landfill gas has an expected capacity of about the same.

Why should the US Virgin Islands own solar assets?
The US Virgin Islands should invest in solar assets for enhanced portfolio diversification and risk mitigation. WAPA ownership guarantees coverage by WAPA and FEMA during natural disasters,eliminating uncertainties (1. Enhanced Portfolio Diversity: WAPA diversifies its energy portfolio,ensuring a more resilient and sustainable future).

What is the cost of electricity in the USVI?
The electricity rates in the USVI are $0.47 per kilowatt-hour (kWh). This is higher than the Caribbean regional average of $0.33/kWh.

Do St Thomas and St Croix have electricity?
As of late 2014,both St. Thomas and St. John were served by one electrical grid run by the Virgin Island Water and Power Authority (WAPA). St. Croix,however,has a separate electrical grid in the WAPA service area. More than 1,000 distributed renewable energy systems were connected to the WAPA grid.
