

Where should you put solar panels?

Here are the most common places to put your panels, and areas to avoid. Rooftops are the most common places you'll see solar panels, but you have other options too. Installing solar panels can be a great leap toward electricity cost savings and energy efficiency. But the road to making it happen can be long and tricky.

Which direction should solar panels be mounted?

The best direction is to have your panels facing south, followed by west or east. You can position/optimize your panels on a flat roof using a mounting system. Bear in mind that the angle and direction changes depending on your location in the world. You can start designing your solar system here with our free tool.

Where should solar panels be placed in the UK?

The best spot for solar panels in the UK is a roof that faces south and has a tilt of about 35 degrees. But remember, these are just general guidelines. Other factors - like shading from your immediate environment and your specific location - could affect where your installer can place your solar panels.

What angle should solar panels be installed on a roof?

Anywhere between 20 and 50 degrees will usually enable your system to produce roughly as much electricity as it could. And in the case of most rooftop solar panel installations, the angle of the solar panels is determined by the angle of the roof - so there isn't much you can do to change it.

Where do solar panels go?

Rooftops are the most common places you'll see solar panels, but you have other options too. Installing solar panels can be a great leap toward electricity cost savings and energy efficiency. But the road to making it happen can be long and tricky. One problem you'll likely encounter: Just where will these panels go?

Should solar panels be facing south or west?

Naturally, solar panels in the UK will work best when facing south, as it means they're facing the sun. But if your roof doesn't allow for a southern exposure, east-west orientations can also work. Panels facing east will make more electricity in the morning, while those facing the west will generate more power in the afternoon and evening.
