It seems that some wind farms in the U.K. are not living up to expectations in terms of production. Wind turbines are intermittent, and it was thought that spreading enough wind over a large area would constitute a statistically-useful amount of reliability in the system as a whole i.e.

El Marquesado Wind Farm has a capacity of 198 megawatts (MW) and is Spain's second largest wind farm, located in Granada. With an annual output of 450 gigawatt hours, the El Marquesado complex encompasses four wind farms, each with a capacity of 49.5 MW.

Two companies have come forward so far with plans to build offshore wind farms off the Costa Tropical. We did an article on the 1st of March about this kind of energy-generating infrastructure, which you might like to read first and come back to this one before continuing.. The two companies that want to build these floating wind farms are Capital Energy ...
